Before you invest, you may want to review the statutory prospectus (the “Prospectus”), which contains more information about the Themes Humanoid Robotics ETF (the “Fund”) and its risks. You can find the Fund’s Prospectus, reports to shareholders, and other information about the Fund, including the Fund’s Statement of Additional Information, online at www.ThemesETFs.com. You can also get this information at no cost by calling 1-866-5Themes (1-866-584-3637). The current Prospectus and Statement of Additional Information dated January 28, 2026 are incorporated by reference into this Summary Prospectus.

Fund Summary

Themes Humanoid Robotics ETF

Investment Objective

The Themes Humanoid Robotics ETF (the “Fund”) is an exchange traded fund (“ETF”) that seeks to track the performance, before fees and expenses, of an index composed of companies which derive significant revenue from the design and development of humanoid and service robots.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.35%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ¹	0.00%
Total Annual Fund Operating Expenses	0.35%

¹ Restated to reflect current fees

Example

The following example is intended to help retail investors compare the cost of investing in the Fund with the cost of investing in other funds. It illustrates the hypothetical expenses that such investors would incur over various periods if they were to invest \$10,000 in the Fund for the time periods indicated and then redeem all of the Shares at the end of those periods. This example assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$36	\$113	\$197	\$443

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal year ended September 30, 2025, the Fund’s portfolio turnover rate was 197% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund employs a “passive management” (or indexing) investment approach designed to track the performance, before fees and expenses, of the Solactive Global Humanoid Robotics Index, or any successor thereto (the “Index”). The Index is based on a proprietary methodology developed and maintained by Solactive AG (the “Index Provider”), which is an organization that is independent of, and unaffiliated with, the Fund and Themes Management Company, LLC, the Fund’s investment adviser (the “Adviser”).

The Index

The Index is designed to provide exposure to companies that have business operations in the humanoid robotics industry, including service robotics and AI-driven automation technologies, and companies that design robots for human interaction, industrial and autonomous robots for manufacturing and logistics, assistive and wearable robotics for mobility and healthcare, as well as companies providing artificial intelligence, cognitive computing and advanced hardware technologies that power the next-generation in robotics. The Index is denominated in U.S. dollars. As of December 31, 2025, the Index was comprised of 30 companies with a market capitalization range of between approximately \$190.5 million and \$4.5 trillion and a weighted average market capitalization of approximately \$257.4 billion.

In constructing or adjusting the Index, the Index Provider identifies an “Index Universe” of companies that, on Selection Days (as defined below), fulfill the following requirements: 1) have a primary listing in South Korea, China or a country classified as a developed country according to the Index Provider (Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom, and the United States); and 2) have a minimum Average Daily Value Traded of at least \$1 million over 1 month and over 6 months prior to and including the Selection Day. The Average Daily Value Traded for a security is the sum of daily value traded over the specified period divided by the number of trading days that fall in the specified period.

Based on the Index Universe, the initial composition of the Index, as well as any selection for an ordinary rebalance, is determined on the Selection Day by first screening publicly available information such as financial news, business profiles and company publications using the Index Provider’s proprietary natural language processing algorithm (“ARTIS®”) to identify companies that have or are expected to have exposure to the provision of products and/or services that contribute to the humanoid robotics industry. The Index Provider identifies relevant search terms for ARTIS® that best represent the humanoid robotics industry, as reflected by the following areas (the “Humanoid Robotics Industry”):

- **Humanoid & Service Robotics:** AI-powered robots designed for human-like interaction and assistance in sectors such as customer service, healthcare, and household environments. These systems leverage technologies like natural language processing, dexterous manipulation, and human-robot collaboration to perform complex social and physical tasks in dynamic settings.
- **Industrial & Autonomous Robotics:** Smart robotic systems built for manufacturing, logistics, and industrial automation. These robots improve efficiency and precision in structured and semi structured environments, enabled by AI-driven navigation, robotic perception, and adaptive motion control. This segment also includes collaborative robots (cobots) designed to work safely alongside humans.
- **Assistive & Wearable Robotics:** Robotic exoskeletons and AI-enhanced wearable systems that support mobility, rehabilitation, and elderly care. These solutions enhance strength and motor function, often integrating advanced cybernetic systems and brain-machine interfaces for intuitive control and real-time responsiveness.
- **AI & Cognitive Robotics:** Artificial intelligence, machine learning, and automation technologies that drive the next generation of robotics. This segment includes innovations like cognitive computing, sensor fusion, neuromorphic processing, and generative AI—enabling robots to perceive, learn, and make decisions in real time, with increasing levels of autonomy and adaptability.
- **Robot Mobility, Actuation & Mechatronics:** Core mechanical and electronic systems that power humanoid motion and interaction. This includes robotic joints, servo motors, high-precision actuators, electric limb

systems, and dexterous end effectors. These components provide the physical capabilities required for smooth locomotion, fine motor skills, and human-like movement in bipedal and articulated robots.

Each company identified by ARTIS® receives a score that reflects its exposure to the Humanoid Robotics Industry. This set of companies is then reviewed by the Index Provider and companies are removed from the selection process if they don't have business operations consistent with the Humanoid Robotics Industry. Companies are only eligible for the Index if they generate at least 50% of their revenues from the Humanoid Robotics Industry. The remaining companies ("Humanoid Robotics Companies") are ranked by their ARTIS® score (in descending order) and the top 30 companies are selected for inclusion in the Index ("Index Components"). The determination of the Index Universe and the selection of Index Components is made by the Index Provider based on its proprietary methodology.

"Selection Day" is 20 business days before the Rebalance Day. "Rebalance Day" is the first Wednesday in February, May, August and November. A weight cap is applied for each Index Component by redistributing any weight which is larger than 4.5% to other Index Components proportionally in an iterative manner. Adjustments to the Index are made on Rebalance Day. The Index Components may change over time.

The Fund's Investment Strategy

The Fund will invest, under normal circumstances, at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities that comprise the Index and American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs") based on the securities in the Index. The Fund will also invest, under normal circumstances, at least 80% of its net assets, plus borrowings for investment purposes, in securities of Humanoid Robotics Companies and ADRs and GDRs based on such securities. The Index may include securities of large-, mid- and small-capitalization companies from developed and/or emerging markets. The Fund's 80% Policies are non-fundamental and require 60 days prior written notice to shareholders before they can be changed.

The Fund uses a "passive" or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to beat the Index and does not seek temporary defensive positions when markets decline or appear overvalued. Indexing may eliminate the chance that the Fund will substantially outperform the Index but also may reduce some of the risks of active management, such as poor security selection. Indexing seeks to achieve lower costs and better after-tax performance by aiming to keep portfolio turnover low in comparison to actively managed investment companies.

The following China-related securities may be included in the Index and/or represent investments of the Fund:

- China A-Shares, which are shares of companies incorporated in mainland China that are traded on the Chinese exchanges and denominated in domestic renminbi. China A-Shares are primarily purchased and sold in the domestic Chinese market. To the extent the Fund invests in China A-Shares, it expects to do so through the trading and clearing facilities of a participating exchange located outside of mainland China ("Stock Connect Programs"). A Renminbi Qualified Foreign Institutional Investor ("RQFII") or Qualified Foreign Institutional Investor ("QFII") license may also be acquired to invest directly in China A-Shares.
- China B-Shares, which are shares of companies listed on the Shanghai or Shenzhen Stock Exchange but quoted and traded in foreign currencies (such as Hong Kong Dollars or U.S. Dollars), which were primarily created for trading by foreign investors.
- China H-Shares, which are shares of companies incorporated in mainland China and listed on the Hong Kong Stock Exchange ("H-Shares"), where they are traded in Hong Kong dollars and may be traded by foreign investors.
- China N-Shares, which are shares of companies with business operations in mainland China and listed on an American stock exchange, such as NYSE or NASDAQ ("N-Shares").
- P-Chips, which are shares of private sector companies with a majority of their business operations in mainland China and controlling private Chinese shareholders, which are incorporated outside of mainland China and traded on the Hong Kong Stock Exchange in Hong Kong dollars.

- S-Chips, which are shares of companies with business operations in mainland China and listed on the Singapore Exchange. S-Chip shares are issued by companies incorporated anywhere, but many are registered in Singapore, the British Virgin Islands, the Cayman Islands, or Bermuda.

The Fund will generally use a “replication” strategy to achieve its investment objective, meaning it will invest in all of the component securities of the Index in the same approximate proportion as in the Index. However, the Fund may utilize a representative sampling strategy with respect to the Index when a replication strategy might be detrimental or disadvantageous to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of equity securities to replicate the Index, in instances in which a security in the Index becomes temporarily illiquid, unavailable or less liquid, or as a result of legal restrictions imposed by various governments (e.g., U.S. or China) (such as tax diversification requirements or sanctions) that apply to the Fund but not the Index. Securities subject to sanctions by the U.S., United Kingdom and/or European Union authorities are excluded from the Index Universe by the Index Provider and Index Components that become subject to any such sanctions or nationalization are removed by the Index Provider from the Index. The Adviser expects that, over time, the correlation between the Fund’s performance and that of the Index, before fees and expenses, will be 95% or better. If the Fund uses a replication strategy, it can be expected to have greater correlation to the Index than if it uses a representative sampling strategy.

The Fund is non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. To the extent the Index is concentrated (i.e., holds 25% or more of its total assets) in a particular industry or group of industries, the Fund is expected to be concentrated in that industry or group of industries to approximately the same extent that the Index concentrates in an industry or group of industries. As of December 31, 2025, a significant portion of the Index is represented by securities of companies in the Humanoid Robotics Industry, and the Information Technology, Industrials and Consumer Discretionary sectors. The degree to which components of the Index represent certain sectors or industries may change over time.

The Fund may lend securities representing up to one-third of the value of the Fund’s total assets (including the value of any collateral received).

Principal Risks of Investing in the Fund

You can lose money on your investment in the Fund. The Fund is subject to the risks summarized below. Some or all of these risks may adversely affect the Fund’s net asset value per share (“NAV”), trading price, yield, total return and/or ability to meet its objectives. For more information about the risks of investing in the Fund, see the section in the Fund’s prospectus entitled “Additional Information about the Principal Risks of Investing in the Funds.” Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears.

- **Concentration Risk.** To the extent that the Index concentrates in investments related to a particular industry or group of industries, the Fund is expected to also concentrate its investments to approximately the same extent. In such event, the Fund’s performance will be particularly susceptible to adverse events impacting such industry, which may include, but are not limited to, the following: general economic conditions or cyclical market patterns that could negatively affect supply and demand; competition for resources; adverse labor relations; political or world events; obsolescence of technologies; and increased competition or new product introductions that may affect the profitability or viability of companies in a particular industry. As a result, the value of the Fund’s investments may rise and fall more than the value of shares of a fund that invests in securities of companies in a broader range of industries.

- *Humanoid Robotics Companies Risk.* Humanoid Robotics Companies typically have high research and capital expenditures and, as a result, their profitability can vary widely, if they are profitable at all. The space in which they are engaged is highly competitive and issuers' products and services may become obsolete very quickly. These companies are heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. The issuers are also subject to legal, regulatory and political changes that may have a large impact on their profitability. A failure in an issuer's product or even questions about the safety of the product could be devastating to the issuer, especially if it is the flagship product of the issuer. Securities of Humanoid Robotics Companies tend to be more volatile than securities of companies that rely less heavily on technology. Humanoid Robotics Companies typically engage in significant amounts of spending on research and development, and rapid changes to the field could have a material adverse effect on a company's operating results. Additionally, significant breakthroughs may be delayed which in turn could delay returns on investments beyond the investment horizon. The development and commercialization of fully-functional humanoid robots involve complex and evolving technologies, which may face unforeseen technical challenges, regulatory hurdles, and market acceptance issues. As a result, investments in Humanoid Robotics Companies may be subject to higher levels of risk and volatility.
- **Risk of Investing in China.** The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions in China and surrounding Asian countries and may demonstrate significantly higher volatility from time to time in comparison to developed markets. China may be subject to considerable degrees of economic, political and social instability. Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Chinese companies are also subject to the risk that Chinese authorities can intervene in their operations and structure. In addition, the Chinese economy is export-driven and highly reliant on trading with key partners. A downturn in the economies of China's primary trading partners could slow or eliminate the growth of the Chinese economy and adversely impact the Fund's investments. The Chinese government strictly regulates the payment of foreign currency denominated obligations and sets monetary policy. The Chinese government may introduce new laws and regulations that could have an adverse effect on the Fund. Although China has begun the process of privatizing certain sectors of its economy, privatized entities may lose money and/or be re-nationalized.

In the Chinese securities markets, a small number of issuers may represent a large portion of the entire market. The Chinese securities markets are subject to more frequent trading halts, low trading volume and price volatility. In recent years, Chinese entities have incurred significant levels of debt and Chinese financial institutions currently hold relatively large amounts of non-performing debt. Thus, there exists a possibility that widespread defaults could occur, which could trigger a financial crisis, freeze Chinese debt and finance markets and make Chinese securities illiquid.

In addition, trade relations between the U.S. and China have recently been strained. Worsening trade relations between the two countries could adversely impact the Fund, particularly to the extent that the Chinese government restricts foreign investments in Chinese companies or the U.S. government restricts investments by U.S. investors in China. There may be companies included in the Index that have at times been, and may in the future be, subject to such restrictions. These recent developments have heightened concerns of increased tariffs and restrictions on trade between the two countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on China's export industry and a commensurately negative impact on the Fund. Market volatility and volatility in the price of Fund shares may also result.

The political reunification of mainland China and Taiwan, over which mainland China continues to claim sovereignty, is a highly complex issue. There is the potential for future political, military or economic disturbances that may have an adverse impact on the values of the Fund's investments in mainland China and elsewhere, or make certain Fund investments impractical or impossible. Any escalation of hostility between mainland China and Taiwan would likely have a significant adverse impact on the value and liquidity of the Fund's investments in both mainland China and elsewhere, causing substantial investment losses for the Fund.

Disclosure and regulatory standards in emerging market countries, such as China, are in many respects less stringent than U.S. standards. There is substantially less publicly available information about Chinese issuers than there is about U.S. issuers. Chinese companies, including Chinese companies that are listed on U.S. exchanges, are not subject to the same degree of accounting standards or auditor oversight as companies in more developed countries. As a result, information about the Chinese securities in which the Fund invests may be less reliable or complete. Chinese companies with securities listed on U.S. exchanges may be delisted if they do not meet U.S. accounting standards and auditor oversight requirements, such as those mandated by the Holding Foreign Companies Accountable Act (HFCAA), which would significantly decrease the liquidity and value of the securities. In addition, there may be significant obstacles to obtaining information necessary for investigations into or litigation against Chinese companies, and shareholders may have limited legal remedies. The Fund is not actively managed and does not select investments based on investor protection considerations.

- *Risk of Investments in A-Shares:* Investments by foreign investors in A-Shares are subject to various restrictions, regulations and limits. Investments in A-Shares are heavily regulated and the repatriation of assets invested in A-Shares is subject to restrictions by the Chinese government. The Chinese government may intervene in the A-Shares market and halt or suspend trading of A-Share securities for short or even extended periods of time. Recently, the A-Shares market has experienced considerable volatility and been subject to frequent and extensive trading halts and suspensions. These trading halts and suspensions have, among other things, contributed to uncertainty in the markets and reduced the liquidity of the securities subject to such trading halts and suspensions. This could cause volatility in the Fund's share price and subject the Fund to a greater risk of trading halts.
- *A-Shares Tax Risk:* The Fund's investments in A-Shares will be subject to a number of taxes and tax regulations in China. The application of many of these tax regulations is at present uncertain. Moreover, China has implemented a number of tax reforms in recent years, including the value added tax reform, and may continue to amend or revise existing Chinese tax laws in the future. Changes in applicable Chinese tax law, particularly taxation on a retrospective basis, could reduce the after-tax profits of the Fund directly or indirectly by reducing the after-tax profits of the companies in China in which the Fund invests. Uncertainties in the Chinese tax rules governing taxation of income and gains from investments in A-Shares could result in unexpected tax liabilities for the Fund. The Fund's investments in securities issued by Chinese companies, including A-Shares, may cause the Fund to become subject to withholding income tax and other taxes imposed by China. The Chinese taxation rules are evolving, may change, and new rules may be applied retroactively. Any such changes could have an adverse impact on Fund performance.
- *Stock Connect Programs Risk:* The Stock Connect Programs are subject to daily quota limitations, and an investor cannot purchase and sell the same security on the same trading day, which may restrict the Fund's ability to invest in A-Shares through the Programs and to enter into or exit trades on a timely basis. The Shanghai and Shenzhen markets may be open at a time when the participating exchanges located outside of mainland China are not active, with the result that prices of A-Shares may fluctuate at times when the Fund is unable to add to or exit its positions. Only certain China A-Shares are eligible to be accessed through the Stock Connect Programs. Such securities may lose their eligibility at any time, in which case they could be sold but could no longer be purchased through the Stock Connect Programs. Because the Stock Connect Programs are still evolving, the actual effect on the market for trading A-Shares with the introduction of large numbers of foreign investors is still relatively unknown. Further, regulations or restrictions, such as limitations on redemptions or suspension of trading, may adversely impact the program. There is no guarantee that the participating exchanges will continue to support the Stock Connect Programs in the future.

Investments in China A-Shares may not be covered by the securities investor protection programs of either the Shanghai or Shenzhen Stock Exchange and, without the protection of such programs, will be subject to the risk of default by the broker. Because of the way in which China A-Shares are held in the Stock Connect Programs, the Fund may not be able to exercise the rights of a shareholder and may be limited in its ability to pursue claims against the issuer of a security, and may suffer losses in the event the depository of the Chinese exchange becomes insolvent.

- *B-Shares Risk:* The China B-Share market is generally smaller, less liquid and has a smaller issuer base than the China A-Share market. The issuers that compose the B-Share market include a broad range of companies, including companies with large, medium and small capitalizations. Further, the B-Shares market may behave very differently from other portions of the Chinese equity markets, and there may be little to no correlation between the performance of the two.
- *H-Shares Risk.* H-Shares are foreign securities which, in addition to the Foreign Securities Risk described below, are subject to the risk that the Hong Kong stock market may behave very differently from the mainland Chinese stock market. There may be little to no correlation between the performance of the Hong Kong stock market and the mainland Chinese stock market.
- *N-Shares Risk.* Because companies issuing N-Shares have business operations in China, they are subject to certain political and economic risks in China. The American stock market may behave very differently from the mainland Chinese stock market, and there may be little to no correlation between the performance of the two.
- *P-Chip Companies Risk.* Because P-Chip companies are traded on the Hong Kong Stock Exchange, P-Chips are subject to risks similar to those associated with investments in H Shares. They are also subject to risks affecting their jurisdiction of incorporation, including any legal or tax changes.
- *S-Chip Companies Risk.* S-Chip companies are subject to risks affecting their jurisdiction of incorporation, including any legal or tax changes. S-Chip companies may or may not be owned at least in part by a Chinese central, provincial or municipal government and be subject to the types of risks that come with such ownership described herein. There may be little or no correlation between the performance of the Singapore stock market and the mainland Chinese stock market.
- *Special Risk Considerations of Investing in China.* For purposes of raising capital offshore on exchanges outside of China, including on U.S. exchanges, many Chinese-based operating companies are structured as Variable Interest Entities (“VIEs”). In this structure, the Chinese-based operating company is the VIE and establishes an entity, which is typically offshore in a foreign jurisdiction, such as the Cayman Islands. The offshore entity lists on a foreign exchange and enters into contractual arrangements with the VIE. This structure allows Chinese companies in which the government restricts foreign ownership to raise capital from foreign investors. While the offshore entity has no equity ownership of the VIE, these contractual arrangements permit the offshore entity to consolidate the VIE’s financial statements with its own for accounting purposes and provide for economic exposure to the performance of the underlying Chinese operating company. Therefore, an investor in the listed offshore entity, such as the Fund, will have exposure to the Chinese-based operating company only through contractual arrangements and has no ownership in the Chinese-based operating company. Furthermore, because the offshore entity only has specific rights provided for in these service agreements with the VIE, its abilities to control the activities at the Chinese-based operating company are limited and the operating company may engage in activities that negatively impact investment value.

While the VIE structure has been widely adopted, it is not formally recognized under Chinese law and therefore there is a risk that the Chinese government could prohibit the existence of such structures or negatively impact the VIE’s contractual arrangements with the listed offshore entity by making them invalid. If these contracts were found to be unenforceable under Chinese law, investors in the listed offshore entity, such as the Fund, may suffer significant losses with little or no recourse available. If the Chinese government determines that the agreements establishing the VIE structures do not comply with Chinese law and regulations, including those related to restrictions on foreign ownership, it could subject a Chinese-based issuer to penalties, revocation of business and operating licenses, or forfeiture of ownership interest.

- **Calculation Methodology Risk.** The Index Provider relies directly or indirectly on various sources of information to assess the criteria of issuers included in the Index, including information that may be based on assumptions and estimates. Neither the Fund, the Index Provider, or the Adviser can offer assurances that the Index’s calculation methodology or sources of information will provide an accurate assessment of included issuers or a correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.
- **Calculation Methodology Risk Related to Certain Chinese Companies.** In the Chinese equity market, free float market capitalization is significantly lower than total market capitalization. This lower float ratio is primarily due to widespread government ownership. As a result, certain well-known Chinese companies may be excluded from or have lower weights in an Index as a result of the inclusion of securities ranked by their free float market capitalization in an Index.
- **Custody Risk.** Investments in emerging markets, such as China, may be subject to even greater custody risks than investments in more developed markets. Less developed markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by local banks, agents and depositories. In accordance with Chinese regulations and the terms of a QFII or RQFII license, as applicable, and insofar as the Adviser acquires a QFII or RQFII license, A-Shares will be held in the joint names of the Fund and the Adviser. While the Adviser may not use such an account for any purpose other than for maintaining the Fund’s assets, the Fund’s assets may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Fund. There is a risk that creditors of the Adviser may assert that the securities are owned by the Adviser and that regulatory actions taken against Adviser may affect the Fund. The risk is particularly acute in the case of cash deposited with a People’s Republic of China (“PRC”) sub-custodian (“PRC Custodian”) because it may not be segregated, and it may be treated as a debt owing from the PRC Custodian to the Fund as a depositor. Thus, in the event of a PRC Custodian bankruptcy, liquidation, or similar event, the Fund may face difficulties and/or encounter delays in recovering its cash.
- **Cybersecurity Risk.** Failures or breaches of the electronic systems of the Fund and/or the Fund’s service providers, including the Adviser, Index Provider, market makers, Authorized Participants or the issuers of securities in which the Fund invests have the ability to cause disruptions, negatively impact the Fund’s business operations and/or potentially result in financial losses to the Fund and its shareholders. While the Fund has established business continuity plans and risk management systems seeking to address system breaches or failures, there are inherent limitations in such plans and systems. Furthermore, the Fund cannot control the cybersecurity plans and systems of the Fund’s Index Provider, Adviser, other service providers, market makers, Authorized Participants or issuers of securities in which the Fund invests.
- **Depositary Receipts Risk.** Depositary receipts (e.g., ADRs and GDRs) which involve similar risks to those associated with investments in foreign securities. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Index, may negatively affect the Fund’s ability to replicate the performance of the Index. The issuers of depositary receipts may discontinue issuing new depositary receipts and withdraw existing depositary receipts at any time, which may result in costs and delays in the distribution of the underlying assets to the Fund and may negatively impact the Fund’s performance and the Fund’s ability to replicate/track the performance of its Index.
- **Emerging Markets Risk.** Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to such securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments or investments in more developed international markets. Such conditions may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares and cause the Fund to decline in value.

- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific industries, sectors or companies in which the Fund invests. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. The Fund’s NAV and market price may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time.

- **ETF Risks.** The Fund is an ETF and, as a result of an ETF’s structure, is exposed to the following risks:
 - *Authorized Participants (“APs”), Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, shares of the Fund may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.

 - *Costs of Buying or Selling Shares of the Fund.* Due to the costs of buying or selling shares of the Fund, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of shares of the Fund may significantly reduce investment results and an investment in shares of the Fund may not be advisable for investors who anticipate regularly making small investments.

 - *Shares of the Fund May Trade at Prices Other Than NAV.* As with all ETFs, shares of the Fund may be bought and sold in the secondary market at market prices. The price of shares of the Fund, like the price of all traded securities, will be subject to factors such as supply and demand, as well as the current value of the Fund’s portfolio holdings. Although it is expected that the market price of the shares of the Fund will approximate the Fund’s NAV, there may be times when the market price of the shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for shares in the secondary market, in which case such premiums or discounts may be significant.

 - *Trading.* Although shares of the Fund are listed for trading on a national securities exchange, such as The NASDAQ Stock Market LLC (the “Exchange”), and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that shares of the Fund will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of shares of the Fund may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than shares of the Fund, and this could lead to differences between the market price of the shares of the Fund and the underlying value of those shares.

- **Currency Risk.** The Fund may invest in securities denominated in foreign currencies. Because the Fund’s NAV is determined in U.S. dollars, the Fund’s NAV could decline if currencies of the underlying securities depreciate against the U.S. dollar or if there are delays or limits on repatriation of such currencies. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund’s NAV may change quickly and without warning, which could have a significant negative impact on the Fund.

- **Foreign Securities Risk.** The Fund's investments in foreign securities can be riskier than U.S. securities investments. Investments in the securities of foreign issuers (including investments in ADRs and GDRs) are subject to the risks associated with investing in those foreign markets, such as heightened risks of inflation or nationalization. The prices of foreign securities and the prices of U.S. securities have, at times, moved in opposite directions. In addition, securities of foreign issuers may lose value due to political, economic and geographic events affecting a foreign issuer or market. During periods of social, political or economic instability in a country or region, the value of a foreign security traded on U.S. exchanges could be affected by, among other things, increasing price volatility, illiquidity, or the closure of the primary market on which the security (or the security underlying the ADR or GDR) is traded. You may lose money due to political, economic and geographic events affecting a foreign issuer or market.

- **Geographic Risk.** A natural, biological or other disaster could occur in a geographic region in which the Fund invests, which could affect the economy or particular business operations of companies in the specific geographic region, causing an adverse impact on the Fund's investments in the affected region or in a region economically tied to the affected region. The securities in which the Fund invests and, consequently, the Fund are also subject to specific risks as a result of their business operations, including, but not limited to:
 - *Risk of Investing in Developed Markets.* The Fund's investment in a developed country issuer may subject the Fund to regulatory, political, currency, security, economic and other risks associated with developed countries. Developed countries tend to represent a significant portion of the global economy and have generally experienced slower economic growth than some less developed countries. Certain developed countries have experienced security concerns, such as terrorism and strained international relations. Incidents involving a country's or region's security may cause uncertainty in its markets and may adversely affect its economy and the Fund's investments. In addition, developed countries may be impacted by changes to the economic conditions of certain key trading partners, regulatory burdens, debt burdens and the price or availability of certain commodities.

 - *Risk of Investing in Asia.* Many Asian economies have experienced rapid growth and industrialization in recent years, but there is no assurance that this growth rate will be maintained. Other Asian economies, however, have experienced high inflation, high unemployment, currency devaluations and restrictions, and over-extension of credit. Geopolitical hostility, political instability, as well as economic or environmental events in any one Asian country may have a significant economic effect on the entire Asian region, as well as on major trading partners outside Asia. Any adverse event in the Asian markets may have a significant adverse effect on some or all of the economies of the countries in which the Fund invests. Many Asian countries are subject to political risk, including political instability, corruption and regional conflict with neighboring countries. North Korea and South Korea each have substantial military capabilities, and historical tensions between the two countries present the risk of war. Escalated tensions involving the two countries and any outbreak of hostilities between the two countries, or even the threat of an outbreak of hostilities, could have a severe adverse effect on the entire Asian region. Certain Asian countries have also developed increasingly strained relationships with the U.S., and if these relations were to worsen, they could adversely affect Asian issuers that rely on the U.S. for trade. In addition, many Asian countries are subject to social and labor risks associated with demands for improved political, economic and social conditions.

 - *Risk of Investing in South Korea.* Investments in South Korean issuers involve risks that are specific to South Korea, including legal, regulatory, political, currency, security and economic risks. Substantial political tensions exist between North Korea and South Korea. Escalated tensions involving the two nations and the outbreak of hostilities between the two nations, or even the threat of an outbreak of hostilities, could have a severe adverse effect on the South Korean economy. In addition, South Korea's economic growth potential has recently been on a decline because of a rapidly aging population and structural problems, among other factors. The South Korean economy is heavily reliant on trading exports and disruptions or decreases in trade activity could lead to further declines.

- *Risks of Investing in Japan.* The Fund may invest in securities of issuers from Japan. The growth of Japan's economy has recently lagged that of its Asian neighbors and other major developed economies. The Japanese economy is heavily dependent on international trade and has been adversely affected by trade tariffs, other protectionist measures, competition from emerging economies and the economic conditions of its trading partners. The Japanese economy has experienced the effects of the global economic slowdown similar to the United States and Europe, and downturns in the economies of Japan's key trading partners, such as the United States, China and/or countries in Southeast Asia, could also have a negative impact on the Japanese economy as a whole. The Japanese economy also faces several other concerns, including a financial system with large levels of nonperforming loans, over-leveraged corporate balance sheets, extensive cross-ownership by major corporations, a changing corporate governance structure, and large government deficits. These issues may cause a continued slowdown of the Japanese economy.
- **International Closed Market Trading Risk.** To the extent that the underlying investments held by the Fund trade on foreign exchanges that may be closed when the securities exchange on which the Fund's Shares trade is open, there are likely to be deviations between the current price of such an underlying security and the last quoted price for the underlying security (i.e., the Fund's quote from the closed foreign market). These deviations could result in premiums or discounts to the Fund's NAV that may be greater than those experienced by other ETFs.
- **Large-Capitalization Investing Risk.** The Fund's performance may be adversely affected if securities of large-capitalization companies underperform securities of smaller-capitalization companies or the market as a whole. The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion.
- **Liquidity Risk.** The Fund's investments are subject to liquidity risk, which exists when an investment is or becomes difficult or impossible to purchase or sell at an advantageous time and price. If a transaction is particularly large or if the relevant market is or becomes illiquid, it may not be possible to initiate a transaction or liquidate a position, which may cause the Fund to suffer significant losses and difficulties in meeting redemptions. Liquidity risk may be the result of, among other things, market turmoil, the reduced number and capacity of traditional market participants, or the lack of an active trading market. Markets for securities or financial instruments could be disrupted by a number of events, including, but not limited to, an economic crisis, natural disasters, new legislation or regulatory changes inside or outside the U.S. Liquid investments may become less liquid after being purchased by the Fund, particularly during periods of market stress. In addition, if a number of securities held by the Fund stop trading, it may have a cascading effect and cause the Fund to halt trading. Volatility in market prices will increase the risk of the Fund being subject to a trading halt. Certain countries in which the Fund may invest may be subject to extended settlement delays and/or foreign holidays, during which the Fund will unlikely be able to convert holdings to cash.
- **Mid-Capitalization Companies Risk.** Mid-capitalization companies may have greater price volatility, lower trading volume and less liquidity than large-capitalization companies. In addition, mid-capitalization companies may have smaller revenues, narrower product lines, less management depth and experience, smaller shares of their product or service markets, fewer financial resources and less competitive strength than large-capitalization companies.

- **Natural Language Processing (NLP) Model Risk.** The Index Provider uses NLP models to assist in the development of the Fund's Index. The Index's investment theme is created by the Index Provider and the Index Provider's description of the theme is used by the NLP screening models to identify relevant companies for index consideration. The investment theme must be accurately described in order for the NLP models to identify companies that reflect the themes and sub-themes of the Index. If the description of the theme is incorrect or incomplete, the NLP model may identify companies that are not relevant to the Fund's investment theme or fail to identify companies that are relevant. As a result, securities may be included in or excluded from the Index that would have been excluded or included had the description of the theme been correct and complete. If the composition of the Index reflects such errors, the Fund's portfolio can be expected to also reflect the errors. There is no guarantee that the Index will reflect the theme and sub-theme exposures intended. The Index Provider relies on the integrity of the data being analyzed and its review processes could be adversely affected if erroneous or outdated data is utilized.
- **New Fund Risk.** The Fund has limited operating history. There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case it may experience greater tracking error to its Index than it otherwise would at higher asset levels, or it could ultimately liquidate. The Fund's distributor does not maintain a secondary market in Fund shares.
- **Non-Diversification Risk.** Although the Fund intends to invest in a variety of securities, the Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund. As a result, the Fund may be more exposed to the risks associated with and developments affecting an individual issuer or a smaller number of issuers than a fund that invests more widely. This may increase the Fund's volatility and cause the performance of a relatively smaller number of issuers to have a greater impact on the Fund's performance.
- **Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third parties, failed or inadequate processes and technology or systems failures. The Fund and the Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address significant operational risks.
- **Passive Investment Risk.** The Fund is not actively managed and the Adviser would not sell a security due to current or projected underperformance of a security, industry or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index in accordance with the Index methodology. The Fund invests in securities included in the Index, regardless of their investment merits. The Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors.
 - *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.

- *Industrials Sector Risk.* Companies in the industrials sector may be adversely affected by changes in the supply of and demand for products and services, product obsolescence, claims for environmental damage or product liability and changes in general economic conditions, among other factors.
- *Consumer Discretionary Sector Risk.* Consumer discretionary companies, such as retailers, media companies and consumer services companies, provide non-essential goods and services. These companies manufacture products and provide discretionary services directly to the consumer, and the success of these companies is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer discretionary products in the marketplace.
- **Securities Lending Risk.** To the extent the Fund lends its securities, it may be subject to the following risks: (1) the securities in which the collateral is invested may not perform sufficiently to cover the applicable rebate rates paid to borrowers and related administrative costs; (2) delays may occur in the recovery of securities from borrowers, which could interfere with the Fund's ability to vote proxies or to settle transactions; and (3) although borrowers of the Fund's securities typically provide collateral in the form of cash that is reinvested in securities, there is the risk of possible loss of rights in the collateral should the borrower fail financially.
- **Small-Capitalization Companies Risk.** Compared to mid- and large-capitalization companies, small-capitalization companies may be less stable and more susceptible to adverse developments, and their securities may be more volatile and less liquid.
- **Thematic Investing Risk.** The Fund relies on the Index Provider for the identification of securities for inclusion in the Index that reflect themes and sub-themes, and its performance may suffer if such securities are not correctly identified or if a theme or sub-theme develops in an unexpected manner. Performance may also suffer if the stocks included in the Index do not benefit from the development of such themes or sub-themes. Performance may also be impacted by the inclusion of non-theme relevant exposures in the Index. There is no guarantee that the Index will reflect the theme and sub-theme exposures intended.
- **Tracking Risk.** The Fund's return may not track the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, when the Fund uses a representative sampling approach, the Fund may not be as well correlated with the return of the Index as when the Fund purchases all of the securities in the Index in the proportions in which they are represented in the Index.
- **Valuation Risk.** Independent market quotations for certain investments held by the Fund may not be readily available, and such investments may be fair valued or valued by a pricing service at an evaluated price. These valuations involve subjectivity and different market participants may assign different prices to the same investment. As a result, there is a risk that the Fund may not be able to sell an investment at the price assigned to the investment by the Fund. In addition, the securities in which the Fund invests may trade on days that the Fund does not price its shares; as a result, the value of Fund shares may change on days when investors cannot purchase or sell their Fund holdings.

Fund Performance

The following performance information indicates some of the risks of investing in the Fund. The bar chart shows the Fund's performance for the most recent calendar years ended December 31. The table illustrates how the Fund's average annual returns for the 1-year and since inception periods compare with those of a broad measure of market performance and the Index. The index the Fund tracks changed its methodology in August 2025 to track the performance, before fees and expenses, of an index composed of companies which derive significant revenue from the design and development of humanoid and service robots. This change may limit the relevance of this information. The Fund's past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information will be available on the Fund's website at www.ThemesETFs.com or by calling the Fund toll-free at 1-866-5Themes (1-866-584-3637).

Calendar Year Total Return

During the period of time shown in the bar chart, the Fund's highest quarterly return was 29.64% for the quarter ended September 30, 2025, and the lowest quarterly return was -7.44% for the quarter ended March 31, 2025.

Average Annual Total Returns for the Period Ended December 31, 2025

	1 Year	Since Inception (April 22, 2024)
Themes Humanoid Robotics ETF		
Return Before Taxes	54.45%	37.86%
Return After Taxes on Distributions	54.39%	37.36%
Return After Taxes on Distributions and Sale of Shares	32.27%	29.33%
Solactive Industrial Robotics & Automation Index (reflects no deduction for fees, expenses, or taxes)	28.09%	24.22%
MSCI ACWI Index (reflects no deduction for fees, expenses, or taxes)	22.34%	21.84%
Solactive Global Humanoid Robotics Index (reflects no deduction for fees, expenses, or taxes)	64.62%	114.65%

Management

Investment Adviser

Themes Management Company, LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers

Dingxun (Kevin) Shao, Vice President, Product Management & Development of the Adviser, Calvin Tsang, CFA, Head of Product Management & Development of the Adviser, and Paul Bartkowiak, Associate Vice President, Portfolio Management of the Adviser, are jointly and primarily responsible for the day-to-day management of the Fund. Mr. Shao and Mr. Tsang have served as portfolio managers since the Fund's inception in April 2024 and Mr. Bartkowiak has served as portfolio manager since January 2025.

Buying and Selling Fund Shares

The Fund is an ETF. This means that individual Shares of the Fund may only be purchased and sold in the secondary market through brokers at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

The Fund generally issues and redeems shares at NAV only in large blocks of shares known as “Creation Units,” which only institutions or large investors may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities (the “Deposit Securities”) and/or a designated amount of U.S. cash that the Fund specifies each day.

Investors may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the “bid-ask spread”). Recent information about the Fund, including its net asset value, market price, premiums and discounts, and bid-ask spreads is available on the Fund’s website at www.ThemesETFs.com.

Tax Information

Fund distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is in an IRA or other tax-advantaged retirement account. Distributions may be taxable upon withdrawal from tax-deferred accounts.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase the Fund through a broker or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for activities related to the marketing and promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales person to recommend the Fund over another investment. Ask your sales person or visit your financial intermediary’s website for more information.
